## 1.1 Advanced sed

Name	Command
Update with auto backup	<code>sed -i.bak 's/localhost/myhost/g' my-file, ls my-file*, Link: my-file</code>
Use variables in sed	<code>newip='127.0.1.1'; sed -i "s/127.0.0.1/\$newip/g" my-file Link: unix.com</code>
Only replace the first match	<code>sed -i '0,/localhost/{s/localhost/newstring/}' my-file Link: stackoverflow</code>
Replace multiple lines	<code>sed -i ':a;N;\$!ba;s/Host.*localhost//g' my-file Link: stackexchange</code>
Add a new line to 3th line	<code>sed -i "3i mynew string" my-file</code>
Insert a line of text before a line	<code>sed -i '/KUBELET_NETWORK_ARGS/i newline' my-file</code>

## 1.2 GNUS sed - delete

Name	Command
Replace string	<code>sed -i 's/127.0.0.1/127.0.1.1/g' my-file Link: my-file</code>
Use a different seperator	<code>sed -i 's#127.0.0.1#127.0.1.1#g' my-file</code>
Use a different seperator	<code>sed -i 's#https://www.test.com/test#http://www.try.com#g' my-file</code>
Delete pattern	<code>sed '/KUBELET_NETWORK_ARGS.*d' my-file</code>
Delete matched lines	<code>sed -i 's/*KUBELET_NETWORK_ARGS.*//g' my-file</code>
Delete whitespace	<code>sed -i 's/ //g' my-file</code>
Delete empty lines	<code>sed -i '/^\$/d' my-file</code>
Delete 2nd to 4th lines	<code>sed -i '2,4d' my-file</code>
Delete leading whitespace	<code>sed -i 's/^[ \t]*// ' my-file</code>
Delete trailing whitespace	<code>sed -i 's/[ \t]*\$// ' my-file</code>

## 1.3 GNUS sed - insertion

Name	Command
Insert string to the beginning of lines	<code>sed -i 's/^/head /g' my-file</code>
Insert string to the end of lines	<code>sed -i 's\$/ tail/g' my-file</code>
Add content after nth line	<code>sed -n -i 'p;3a "new string"' my-file, cat -n my-file Link: unix.com</code>
Add a new line to 3rd line	<code>sed -i "3i mynew string" my-file</code>
Insert a line of text before a line	<code>sed -i '/KUBELET_NETWORK_ARGS/i newline' my-file</code>

## 1.4 GNUS sed - review

Name	Command
Print lines from 2nd to 6th	<code>sed -n '2,6p' my-file</code>

## 1.5 Freebsd sed on Mac

Name	Command
In-place sed	<code>sed -i "" 's/127.0.0.1/127.0.1.1/g' my-file, link:stackoverflow</code>
