1.1 Minikube basic

Name	Command
minikube lifecycle	minikube delete, minikube start, minikube status, Link: minikube
Get minikube version	minikube version, Link: all minikube releases
mac install minikube	brew cask install minikube, brew cask reinstall minikube
Start minikube with different machine flavor	minikube startmemory 5120cpus=4
Start minikube with a specific k8s version	minikube startkubernetes-version v1.11.0
Start minikube with more customizations	minikube start -kubernetes-version v1.11.0 -feature-gates=AdvancedAuditing=tr
SSH to minikube vm	minikube ssh, ssh -i ~/.minikube/machines/minikube/id_rsa docker@192.
Your local docker to use minikube dockerd	eval \$(minikube docker-env), Then no need for docker push
Minikube check latest version	minikube update-check
Reference	Minikube CheatSheet, Kubernetes kind CheatSheet
Reference	Kubectl CheatSheet, Kubernetes Yaml

1.2 Check status

Name	Command
Get minikube version	minikube version, Link: all minikube releases
Get cluster info	kubectl cluster-info
Get service info	minikube service <srv-name></srv-name>
Get dashboard	minikube dashboard
Get ip	minikube ip
Get minikube log	minikube logs
List addons	minikube addons list

1.3 Minikube Folders

Name	Command
Mount host OS's folder to minikube VM	minikube mount /host-mount-path:/vm-mount-path
Folder of k8s.io/minikube-hostpath provisioner	<pre>/tmp/hostpath-provisioner, /tmp/hostpath_pv</pre>
Mount host OS's folder to minikube VM	minikube mount /host-mount-path:/vm-mount-path
Critical minikube folder	/var/lib/localkube, /var/lib/docker, /data
Check minikube config in your host OS desktop	~/.minikube/machines/minikube/config.json
Minikube conf in local env	~/.minikube, ~/.kube

1.4 Minikube Advanced

Name	Command
Install addon after creating minikube env	minikube addons enable heapster, kubectl top node

1.5 minikube CLI Online Help

> minikube version

minikube version: v0.31.0

> minikube --help

Minikube is a CLI tool that provisions and manages single-node Kubernetes clusters optimized for development

Usage:

minikube [command]

Available Commands:

addons Modify minikube's kubernetes addons

cache Add or delete an image from the local cache.

completion Outputs minikube shell completion for the given shell (bash or zsh)

Modify minikube config config

dashboard Access the kubernetes dashboard running within the minikube cluster

Deletes a local kubernetes cluster delete

docker-env Sets up docker env variables; similar to '\$(docker-machine env)'

help Help about any command

Retrieves the IP address of the running cluster ip

Gets the logs of the running instance, used for debugging minikube, not user code logs

Mounts the specified directory into minikube mountProfile sets the current minikube profile profile

Gets the kubernetes URL(s) for the specified service in your local cluster service Log into or run a command on a machine with SSH; similar to 'docker-machine ssh'

Retrieve the ssh identity key path of the specified cluster ssh-key

start Starts a local kubernetes cluster

Gets the status of a local kubernetes cluster status Stops a running local kubernetes cluster stop

tunnel tunnel makes services of type LoadBalancer accessible on localhost

update-check Print current and latest version number

update-context Verify the IP address of the running cluster in kubeconfig.

version Print the version of minikube

Flags:

--alsologtostderr log to standard error as well as files

-b, --bootstrapper string The name of the cluster bootstrapper that will set up the kubernetes

-h, --help help for minikube

when logging hits line file:N, emit a stack trace (default :0) --log_backtrace_at traceLocation

--log_dir string If non-empty, write log files in this directory

--logtostderr log to standard error instead of files

-p, --profile string The name of the minikube VM being used.

This can be modified to allow for multiple minikube instances to be

--stderrthreshold severity logs at or above this threshold go to stderr (default 2)

-v, --v Level log level for V logs

--vmodule moduleSpec comma-separated list of pattern=N settings for file-filtered logging

Use "minikube [command] --help" for more information about a command.
